Sheet generator

The sheet generator enables you to create multiple sheets at once. It is very simple to use.

- Start 'multi sheets' from the ribbon
- A dialogue will appear showing you a list of available views and available title blocks for the sheets
- Select one, or multiple views on the left
- Select a title block, on the right
- Decide where to place the view on the sheet (lower or upper left, lower or upper right)
- Press OK

The new sheet(s) will appear in the project browser after they have been generated.
